p. 28-32.

DESCRIPTORS: *Non-destructive testing. *Ultra-
sonics. *Steel. Welds. Castings.

In non-destructive testing the interpretation of mea-
sured results plays a decisive role, especially where
indirect testing methods are concerned. Experiments
on test-pieces afford a valuable control on the inter-
pretation of signals. Detailed experiments are de-
scribed on test-pieces under ultrasonic test. First,
reproducibility was tested, scatter must be taken into
account in borderline cases. The degree of depend-
ence of the ratio of flaw echo to back echo on flaw
